

The Astronomical Journal

<http://www.journals.aas.org/AJ/>

An indispensable information resource for the serious astronomer

One of the world's finest journals in the field of astronomy, *The Astronomical Journal* covers a broad range of modern astrophysics. The expanded coverage of quasars, supernova remnants, and studies of the interstellar medium complement the more traditional areas of astronomy. It is available in both print and electronic format.

With an emphasis on observational papers and a generally short publication time, *The Astronomical Journal* attracts many seminal papers. It is an indispensable journal for any serious astronomer.

The Astrophysical Journal and Supplement Series

<http://www.journals.aas.org/ApJ/>

The most frequently cited papers in the astronomical literature

Published three times each month, in both electronic and paper formats, *The Astrophysical Journal* is one of the foremost journals in the world in astronomy and astrophysics. The *Supplement Series* (published monthly) brings extensive support to the journal with the publication of specialized papers, catalogs, atlases, and other compilations of tabular material. The user-friendly electronic edition has a rich set of features including forward referencing and links to the literature.
