Geology

gsajournals.org

Undoubtedly the most popular and widely read earth-science journal in print, *Geology* contains 20 or more articles each month that are both current and concise. The journal is second ranked in its field in total citations from 1995-2007 (JCR Science Edition) and publishes peer-reviewed research in all areas of the geosciences. Articles are innovative, provocative—often describing significant advances in the field—and are of interest to a broad audience.

Editors and reviewers are at the forefront of their disciplines and, once an article is accepted, it can be published in as little as 15 weeks. *Geology* provides students with insight into the field's hot topics through its feature, 'Research Focus,' and researchers can engage their peers in a discussion of current results through the journal's online forum, 'Comment and Reply.'
