Optics & Photonics News

osa-opn.org

Highly accessible and exciting articles covering the entire optics spectrum

Optics & Photonics News (OPN), OSA's monthly magazine, makes the connection between what's happening in the lab and what's happening in the marketplace by blending industry reports and in-depth features with timely technical articles accessible to the entire optics and photonics community.

In addition to substantial features that cover everything from Lasers in Medicine to Optics in Law Enforcement, and from VCSELs to NASA's Next Generation Space Telescope, *OPN's* regular departments include Electronic Information, Books, Engineering, Education, and Employment Marketplace. Other departments keep readers informed on government, public policy, and legal issues. *OPN* is also accessible online.
