Physical Review Letters

prl.aps.org

Physical Review Letters (PRL) is the world's foremost physics letters journal, providing rapid publication of short reports of significant fundamental research in all fields of physics. International in scope, the journal provides its diverse readership with weekly coverage of major advances in physics and cross disciplinary developments. PRL's topical sections are devoted to general physics (including statistical and quantum mechanics, quantum information, etc.); gravitation and astrophysics; elementary particles and fields; nuclear physics; atomic, molecular, and optical physics; nonlinear dynamics, fluid dynamics, classical optics; plasma and beam physics; condensed matter; and soft-matter, biological, and interdisciplinary physics.

2009 Publication Frequency

Volumes 102, 103 (52 issues)

Format

Print, online, CD-ROM, microfiche

ISSN Print: 0031-9007

Online: 1079-7114
