WILL INCREASING REPRESENTATION FIX EVERYTHING?

• Data should be collected on other important areas
  – Workplace environment
  – Salary

• Even with equal representation, some groups could have limited access to resources and opportunities
PHD+10 (TO 15) STUDY

  – Who lived in the US during 2011
  – 1,544 respondents
  – 45% response rate

• Salary regression showed that men make more than women
  – ~6% more ($p = 0.025$)
  – Controlling for employment sector, time since degree, whether respondent had stayed with same employer, whether or not respondent had take a postdoc, highest degree the department offers (academic only)
GLOBAL SURVEY OF PHYSICISTS, 2009-2010

• About 15,000 respondents from 130 countries
• Conducted in 8 languages
• Separate results for Canada

LONGITUDINAL STUDY OF ASTRONOMY GRADUATE STUDENTS

• Result of Women in Astronomy Conference, 2003 in California, USA
• At that time, about 60% of younger members were women, and AAS wanted to know outcomes for these members.
• Would women have a higher attrition rate? Are women more likely to leave the field? If so, why?
LONGITUDINAL STUDY OF ASTRONOMY GRADUATE STUDENTS

• Partnership between American Institute of Physics and American Astronomical Society (AAS)
• Includes everyone who was in graduate school in astronomy or astrophysics in the US, 2006-07
• Data have been collected from the same cohort of people in order to document individual career paths
• Three waves of data have been collected:
  – 2007-08
  – 2012-13 five years later
  – 2015-16 eight years later
THIS ANALYSIS

• Second survey
• limited to people who
  – completed PhDs at the time of the 2\textsuperscript{nd} survey
  – were not postdocs at the time of the surveys
HYPOTHESIS

We hypothesized that women would be more likely to work outside of astronomy and physics. In other words, being female would have a direct effect on leaving the field, independent of other factors.
IS WORKING IN OR OUT OF FIELD AFFECTED BY

• Being male or female (40% female respondents)
• Taking a postdoc
• Two-body problem (a work/family balance problem that refers to the difficulty of finding 2 jobs in same geographic area)
• Having a mentor other than advisor
• Relationship with advisor
• Imposter syndrome (at time of first survey)
• Time since degree
SECOND SURVEY
DOES BEING MALE OR FEMALE INDEPENDENTLY AFFECT OTHER VARIABLES IN MODEL?

- Gender
- Not a post-doc
- Mentor other than advisor
- Advisor relationship
- Imposter score
- Two-body problem
- Time since degree

Working out of the field
SECOND SURVEY
FACTORS THAT INFLUENCE WORKING OUT OF FIELD

- Relocated for spouse or partner
- Limited career options for someone else
- Completed a postdoc
- Changed advisors

More likely to work out of field
More likely to work in field
ANOTHER HYPOTHESIS

• There may be indirect effects of gender on working out of field.

• In other words, women may be more likely to have experiences that increase the likelihood of working out of field.
SECOND SURVEY
TESTING INDIRECT EFFECTS OF GENDER
EXAMPLE OF ONE MODEL

Gender
Mentor other than advisor
Imposter Score
Two-body problem
Advisor Rating
Change Advisor
SECOND SURVEY
THE INDIRECT EFFECT OF GENDER ON WORKING OUT OF FIELD

[Diagram showing the indirect effect of gender on working out of field]

- Gender
  - Imposter score
    - Advisor rating
    - Relocated for spouse or partner
      - Was not a post-doc
  - Limited career options for someone else
  - Changed advisors
    - Working out of the field
CONCLUSIONS FROM SECOND SURVEY

• We hypothesized that women would be more likely to work outside of astronomy and physics. In other words, being female would have a direct effect on leaving the field, independent of other factors.

• However, there is no direct effect of being female on working outside the field. The effect of being female comes through other factors.

• Women may be more likely to leave astronomy because
  – Women are more likely to report less than satisfactory advising.
  – Women are more likely to report two-body problems related to the need to find two jobs in the same geographic area for a spouse or partner.
WHAT IS AIP DOING ABOUT THE REPRESENTATION OF OTHER UNDER-REPRESENTED GROUPS?

• AIP formed a task force on African Americans in undergraduate physics.

• We will be doing a survey of students, interviews, encouraging departments to collect data, site visits, and case studies.

• This will lead to recommendations for increasing the number of African Americans earning physics bachelor’s degrees.
Thanks to my colleagues
Susan White and Patrick Mulvey
